Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

us-docketing@qualcomm.com kascanla@qualcomm.com nanm@qualcomm.com

		Application No.	Applicant(s)				
Office Action Summary		10/815,256	MICHAELIS ET AL.				
		Examiner	Art Unit				
		Jacob Lipman	2134				
	The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply						
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.  - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.  - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.  - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).							
Status							
2a) <u></u>	1) ☐ Responsive to communication(s) filed on 20 February 2007.  2a) ☐ This action is <b>FINAL</b> . 2b) ☐ This action is non-final.  3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213.						
Disposition of Claims							
	4) Claim(s) <u>1-16,18-29,31,32,34 and 36</u> is/are pending in the application.						
4a) Of the above claim(s) is/are withdrawn from consideration.							
	5)  Claim(s) is/are allowed. 6)  Claim(s) <u>1-16,18-29,31,32,34 and 36</u> is/are rejected.

### Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claim 16, 18, and 21-22, as best understood, are rejected under 35 U.S.C. 103(a) as being unpatentable over Pearce et al., USPN 6,243,468 in view of Ta et al., USPN 6,931,545.

With regard to claims 16 and 18, Pearce discloses a method of associating software with hardware (column 2 lines 35-43) including obtaining a software id (column 3 lines 5-6) and a hardware id (column 3 lines 6-7) and generating a signature for the software (checksum, column 2 lines 48-51), software id, and the hardware id using cryptography (hashing, column 3 lines 7-11) used to validate the software (column 7 lines 11-15). Pearce discloses using a check-sum of the software to authenticate it, but does not specifically disclose using a hash to create a checksum, or to authenticate the software itself. Ta discloses hashing software (creating a hash digest) to create a software ID to use in authenticating the software (column 9 lines 36-42). It would have been obvious for one of ordinary skill in the art to use the hash of Ta as the checksum in Pearce to increase security.

With regard to claim 21 and 22, Pearce discloses checking whether or not to allow software to hardware association based on the hardware (column 8 lines 50-65).

Application/Control Number: 10/815,256 Page 3

Art Unit: 2134

3. Claims 1-15, 19, 20, 23-29, 31, 32, 34, and 36, as best understood, are rejected under 35 U.S.C. 103(a) as being unpatentable over Pearce in view of Ta, in further view of Gralla, in How The Internet Works.

With regard to claims 1-5, 7-12, 14, 15, 19, 20, 23-29, 31, 32, 34, and 36, Pearce in view of Ta discloses associating software with hardware as disclosed above, and discloses sending a information to and from the registration authority over an insecure network (column 4 lines 21-26) but does not disclose that this network communication utilizes public keys and certificates. Gralla discloses that public key cryptography and digital certificates is often used to secure network communication (pages 303-307). It would have been obvious for one of ordinary skill in the art to secure Pearce's network communication with digital certificates and public key cryptography for Gralla's given motivation of protecting information and increasing security (page 303).

With regard to claim 6, Pearce discloses the product number includes a product code serialized number (column 48-51). The examiner further takes official notice that version numbers are often given to software. It would have been obvious for one of ordinary skill in the art to base a product code or serial number on a version number to better identify the product.

With regard to claim 13, Pearce discloses using a wireless network (column 4 lines 21-26).

With regard to claim 26, Pearce discloses checking a database (column 8 lines 56-58).

## Response to Arguments

Art Unit: 2134

4. Applicant's arguments filed 20 February 2007 have been fully considered but they are not persuasive.

Applicant argues that Pearce does not disclose an ID identifying hardware platform, but rather a specific computer. The examiner points out that paragraph 1024 of the specification states that the hardware ID may be a product number or model number, much like Pearce (column 6 lines 1-15). Further, Pearce discloses that the hardware number defined a specific arrangement of hardware components to determine if a component has been removed, but that two separate machines might have the same components and thus the same ID (column 7 lines 24-30), therefor, Pearce discloses the hardware ID identifies a hardware platform and not a specific computer.

Applicant argues that Pearce in view of Ta, in further view of Gralla do not disclose a code image. Applicant's specification defines a code image as software, certificate, and signature. Since Pearce in view of Ta, in further view of Gralla discloses these three elements, there is a code image when combining the references, even if a code image, as defined by applicant, is not found in any single reference.

### Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Jacob Lipman whose telephone number is 571-272-3837. The examiner can normally be reached on M-Fr.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kambiz Zand can be reached on 571-272-3811. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
